PROJECT NAME: NeuralGuard
MEMBERS: Pănescu Alexandru Ștefan

IDEA IN SHORT: NeuralGuard is an urban safety and situational awareness platform that centralizes incidents, alerts, emergency resources, SOS workflows, and preparedness guidance in one place, helping users understand local risks and respond faster in critical situations.

Hardcore Entrepreneur hackathon 6.0

1.PRODUCT - PROBLEM WE SOLVE

People often receive safety information from many disconnected sources: news websites, maps, social media, emergency alerts, local reports, and personal contacts. In a risky situation, this makes it hard to quickly understand what is happening nearby, how serious it is, and what action should be taken. Neural Guard solves this problem by centralizing local incidents, risk signals, emergency resources, SOS alerts, and practical safety guidance into one platform. It helps users move from scattered information to clear situational awareness and faster response.

2. OUR TARGET GROUP & SDGs

Neural Guard is designed for people, communities, organizations, and local authorities that need fast access to reliable safety information. This includes individual users who want to stay aware of nearby risks, families who need SOS and emergency contact features, and institutions or private partners that monitor incidents, mobility issues, public safety, and crisis situations.

Neural Guard supports **SDG 3: Good Health and Well-being** by helping users react faster in emergencies and access first-aid/safety guidance. It supports **SDG 11: Sustainable Cities and Communities** by improving urban safety, preparedness, and local risk awareness. It also connects with **SDG 9: Industry, Innovation and Infrastructure** through the use of digital tools, maps, data aggregation, and AI-assisted situational awareness.

3. SMART OBJECTIVES

1. AI-based Risk Predictions
Develop AI models that predict potential incidents using real-time and historical safety data.

2. Authority Integration
Connect the platform with local authorities and emergency services for faster alerts, validation, and response.

3. Wearable & IoT Integration
Connect NeuralGuard with smartwatches, sensors, and smart city devices to detect emergencies faster and improve situational awareness.

4. Community Verified Reports
Create a system where users and trusted local partners can confirm, update, and validate incidents to reduce misinformation.

5. International Scaling
Expand NeuralGuard to multiple countries by integrating local data sources, languages, and emergency systems.

4. PRICE

Free:
Access to map, incidents, and basic risk score
Premium (€5/month):

- Advanced AI Copilot
- Risk predictions
- Personalized alerts

B2G (Business to Government),Annual licenses for local authorities, city halls, and civil protection agencies, including:

- Extended dashboards for urban management
- Pricing: annual subscription per institution
- Incident monitoring and validation tools
- Crisis management support
- AI-powered decision support and emergency recommendations

B2B:

- Companies (logistics, transport, security)
- API for integrating risk data into external applications

5. PROMOTION

Online Channels:

- Social media (TikTok, Instagram, LinkedIn) – short demos and real-life scenarios
- Website & landing page with live simulations
- Product Hunt and hackathon platforms

Partnerships:

- NGOs focused on safety and first aid
- Local public institutions
- Tech and smart city communities

PR & Awareness:

- Campaigns like *“Be prepared, not surprised”*
- Real-world case studies (accidents, fires, emergencies)
- Live demos in schools and universities

Early Adopters:

- Students
- Drivers (Waze-like audience)
- People living in crowded urban areas
